MEMORANDUM

From: Jay M. Cantor

For: TI-25833 file

After discussion with Bill Stearns and Nick Hassan, it was determined that there is a good possibility that the alleged sales in Europe and Canada mentioned in the invention disclosure were for experimental use only since the monies received didn't cover costs and the parts were made for experimental use only. Bill and Nick are checking this out and should provide memos in this regard. It was not clear that the parts would work and there is nothing to show that the parts did work for their intended purpose.

In addition, the parts sent to Europe and Canada did not conform to the inventive features of the subject invention.
